MoAA Purpose

Missouri has one aquaculture producers organization, the Missouri Aquaculture Association (MoAA). Originally organized as the Missouri Fish Farmers Association (MFFA) in 1963, members voted for the change during the 1996 business meeting. The change was established to broaden the interests of the group and to unite all segments of the industry under one body. The stated mission of MoAA is to promote the success of aquaculture in Missouri. The Association serves the common interest of its members as a unified voice to represent and actively promote the causes and issues which affect the industry and its members. The Association is committed to improving the quantity, quality, and efficiency of aquaculture production in an environmentally responsible manner with maximum opportunity for profitability in all sectors of the industry.

The Association is open to all individuals and firms with an interest in aquaculture. Some benefits of MoAA membership include:

-  Contact with Missouri producers and others in the industry;
-  Notice of important meetings and workshops;
-  Subscription to the MoAA email list;
-  Membership in the National Aquaculture Association (NAA) which includes updates on important issues;
-  Listing in the MoAA printed directory which is also posted on the MoAA web site (www.moaquaculture.org); and
-  Discounted admission to state and national meetings.

Membership in MoAA helps to strengthen the industry and gives fish producers a voice in the future of aquaculture in Missouri. Joining is as easy as completing the application on the next page.

MoAA Membership Application

The Missouri Aquaculture Association is open to anyone interested in aquaculture. Membership is on an annual basis and requires a completed membership application and \$35.00 dues. Members should begin receiving MoAA and National Aquaculture Association updates as soon as their application is received. More information about MoAA as well as this form are available at www.moaquaculture.org. Please mail completed membership forms and payment to the MoAA treasurer at:

History of Missouri Aquaculture

A wagon loaded with containers of fish at Neosho National Fish Hatchery.

In Missouri, aquaculture originated with the State Fish Commission and the Federal government. The State built their first fish hatchery at Brown Spring near St. Joseph and the Federal government developed the Neosho hatchery in 1888. Attempts at commercial aquaculture soon followed and continue through today.

During the early 1920s, several farsighted entrepreneurs made attempts to culture trout in Missouri's many springs. The spring areas in Missouri were unique because most had already been developed to supply power for grist mills and these areas were the gathering places in the Ozarks. One of the first commercial ventures was a small trout hatchery started by a Tulsa dentist named Dr. Furrow at Bennett Spring. In 1924, he sold the facility to the State of Missouri.

Dr. Furrow and a partner from Tulsa, F. Lawrence Bailliere, located another site for raising fish at the village of Wet Glaize in Camden County. This hatchery was the birth of Ozark Fisheries, Inc., one of the oldest and largest continually operating facilities in Missouri. Trout were raised for two years; however, the venture was not profitable. During the 1920s, a fad of keeping goldfish in a bowl was fueled by the establishment of pet departments in many of the major chain stores such as S.S. Kresge and Woolworths. The owners of Ozark Fisheries realized an opportunity and made arrangements to raise goldfish

Workers fill shipping cans used to deliver goldfish from Ozark Fisheries to customers by Railway Express.

and have been in the goldfish business ever since. Currently, Larry Cleveland, a third-generation member of the Bailliere family, is the president of Ozark Fisheries.

During the same era, two German immigrants, H.K. Welpman and A.F. Fagen, started Missouri Goldfish Company in 1929 near Stover. In the early 1950s, Missouri Goldfish was the first in the United States to domesticate and breed the golden shiner. Missouri Goldfish is still in operation under the guidance of a third-generation family member, Randy Welpman.

In the early 1920s, Lige Oliver Williams of Gravois Mills started Troutdale Ranch by modifying a spring that was on his property. In the 1950s and 1960s, the business was owned by John Belcher who sold it to Allen Gates and his family in the mid 1960s. Allen was familiar with the trout operations in Idaho, and realized the potential of trout for Midwest markets. He also invented the boned method of processing trout. In 2002, Dennis and Merritt Van Landuyt purchased Troutdale Ranch from the Gates family and have renovated and renamed it Troutdale Farm.

This historical photo shows someone at the spillway of the property that is now Troutdale Farm.

In 1953, Jim Kahrs, a Missouri native and a recent graduate in Fisheries from Oregon State University, established Osage Catfisheries, Incorporated in Osage Beach convinced that opportunities existed for selling fingerling fish for restocking farm ponds and other uses. The business grew into a very successful fry and fingerling operation and now consists of three farms plus Sycamore Creek Golf Course. Today, Osage Catfisheries is managed by his children.

Bill Flowers was a school teacher in southern Missouri who began fish farming in his spare time. In 1966, he established Flowers Fish Farm in Dexter. Today, the business is operated by his children and has grown to include three farms with a total of 425 acres of water.

After looking around the United States for a suitable site, Mary Alice and Dwight Emerson purchased a spring near Ava in 1951 to produce trout. They encountered many problems in developing a viable business but diligently pursued their dream. Their efforts

Three of the Emerson children and their grandparents loading trout at Crystal Lake Fisheries around 1953.

gradually were rewarded and today Crystal Lake Fisheries, one of the largest trout farms in Missouri, is managed by their children.

In 1954, Lile and Edith Amyx purchased the town of Rockbridge which included the old mill, general store, bank, spring, and fishing stream. Rainbow Trout Ranch and Rockbridge Gun Club is the result of their hard work and is well known throughout the Midwest as a prime vacation spot in the Ozarks.

Grandpa Emerson, Ralph King, and the Emerson children loading fish with Mr. Belcher at Troutdale about 1959.

Crystal Spring, near Cassville, was originally owned and developed by Dr. M.L. Blankenship in the 1930's. It was later owned and further developed by the Pottebom family in the late 1950's.

Today, Robert and Rosemary Krause and family continue to produce trout

for stocking and maintain an area of the facility for those interested in fishing.

Gene Peroit from near Golden and Wayne Lucke of Lucky Lakes near Palmyra were early fish farmers who developed many techniques to make fish farming less difficult. Gene Peroit always had a new trap or different method for harvesting fish from a pond. This innovation and diversity continues in today's producers.

Missouri Aquaculture Leadership

The Missouri aquaculture industry is formally guided by three groups: the Missouri Aquaculture Association, the Missouri Aquaculture Council, and the Missouri Aquaculture Coordinating Council.

Missouri Aquaculture Association

The Missouri Aquaculture Association (MoAA) was established in 1963 as the Missouri Fish Farmers Association. The name changed in 1996 but the Association continues to serve as a unified voice to represent MoAA members in issues that affect them and to promote the aquaculture industry. MoAA is a producer organization led by a twelve member board. These individuals are elected at the annual business meeting as outlined in the MoAA by-laws and serve for a period of three years. The officers are elected from the board. The secretary and treasurer serve for three years while the president and president-elect serve two year terms.

MoAA Board Members and Terms

Merritt Van Landuyt President	Troutdale Farm	2012
Kevin Flowers President-Elect	Flowers Fish Farm	2012
Vanessa Johnson Treasurer	Crystal Lake Fisheries	2013
Paula Moore Secretary	Five Eakers Farms	2011

Bill McKinney	Levasy Lake Pond Stocking Service	2009
Ed McMillen	McMillen-N-Northup Fish	2011
Don Warnol	Warnol Valley Lakes	2011

Missouri Aquaculture Coordinating Council

The Missouri Aquaculture Coordinating Council (MACC) was formed in 1994 as a result of the original Missouri aquaculture plan of 1981. The Council addresses issues of general concern to Missouri aquaculture and identifies areas of the industry where development efforts should be focused. The Missouri Aquaculture Coordinating Council operates under a Memorandum of Understanding between the Missouri Aquaculture Association; Missouri Departments of Agriculture, Conservation, Natural Resources, and Economic Development; Lincoln University and the University of Missouri-Columbia. The Council also includes ex-officio representatives from the Missouri Senate and Missouri House of Representatives.

Crystal Lake Fisheries

Dependable Live Delivery of Rainbow Trout

Crystal Lake Fisheries, Inc. has been a family operated business for 60 years. Our aquaculture facility is fed by the constant flow of a clear Ozark Mountain spring, which produces about 10 million gallons per day. Beautiful, healthy rainbow trout fill 52 compartmentalized raceways at the farm, where rainbows range in size from fry to fingerlings to large adults.

The trout at Crystal Lake Fisheries are produced for live delivery to markets up to twelve hundred miles away. Our programmed feeding allows us to have trout available year around. We sell to resorts, private estates, and other fish farms, as well as city, county and state recreational parks and hatcheries. We carefully sort each order to assure that each delivery will be accurate. Specializing in catchables, other sizes are also available which include lunkers, fingerlings and fry.

Five Eaker's Farms

We produce largemouth bass, grass carp, and channel catfish for the food markets of the United States and Canada. We operate 25 ponds on 200 acres of land in Butler County, Missouri.

We don't haul the fish ourselves, but we sell to livehaulers who deliver truckloads of fish fresh to markets in many cities. We've been in business since 1979 and innovation of new ideas is what keeps us looking toward a bright future.

New species under consideration for production are: bluegill sunfish, freshwater drum, big mouth buffalo, and freshwater mussels. If you have a market for an aquatic species, we'll look into growing it for you.

Flowers Fish Farm

Flowers Fish Farm, LLC is a family owned and operated business with almost 40 years experience in the aquaculture industry. Second generation management strives to produce quality fingerlings and provide service for our customers at competitive prices. With approximately 425 acres of water in production, we produce channel catfish in all size ranges. Bluegill, hybrid bluegill, red ear sunfish, crappie, grass carp, and fathead minnows are also raised on our farm. Please allow us the opportunity to serve you.

Ozark Fisheries

Ozark Fisheries was established in 1926 by F. Lawrence Bailliere with the intent to produce rainbow trout but the focus was changed within two years. In the early 1920's, the big boom in goldfish popularity started with the establishment of pet departments in the large chain stores. There were over 60 goldfish producers in the U.S. in the early 1920's; however, their combined production would only supply goldfish from September through January or February the following year.

On January 1, 1928, Roy Nakashima, was employed to build and operate the new enterprise. The trout raceways were converted to goldfish ponds. Pond construction began with horse teams and slip scoops along with wheelbarrows and shovels.

From the early days, Ozark's goldfish production included Commons, Calico Fantails, Black Telescopic Moors, Red Fantails and Shubunkins. The construction of Lake of the Ozarks late in the 1930's was important for the future of Ozark Fisheries as it allowed cull gold-

fish to be sold throughout the Lake area as bait. By 1936, all the land suitable for pond construction included in the original land purchase had been fully utilized.

In 1970 Ozark Fisheries purchased its largest competitor, Grassyfork Fisheries located in Martinsville, Indiana. Today Ozark Fisheries operates both locations as production and shipping facilities and handles all marketing and business functions from the Missouri farm. The two farms consist of 7,600 acres of land including approximately 800 ponds used to produce goldfish, koi, rosy red minnows, snails, bullfrog tadpoles and crawfish that are used in both aquariums and fish pools throughout North America.

Troutdale Farm

The first recorded use of the spring at Gravois Mills is by the Humes Family in the 1850's when it was developed as a mill for cotton or wool. Later it was used as a fishing lake. The 1930's began its history as a trout farm. Fewer than a dozen have operated the privately owned trout farm since that time and Troutdale's owners have included two past presidents of the US Trout Farmers Association.

Troutdale Farm is a producer and supplier of rainbow trout to fine dining restaurants and quality markets within the state of Missouri. Our trout are sorted, harvested and filleted by hand. Fresh trout is delivered weekly to customer specification. State and Federal inspections of the operation ensure compliance with sanitation and Hazard Analysis Critical Control Point (HACCP) programs. In addition to wholesale business, we participate in the Columbia Farmers Market and sell trout directly from the farm. We support the aquaculture industry through membership in Missouri Aquaculture Association and we support business development of agriculture as a member of AgriMissouri.

Westover Farms

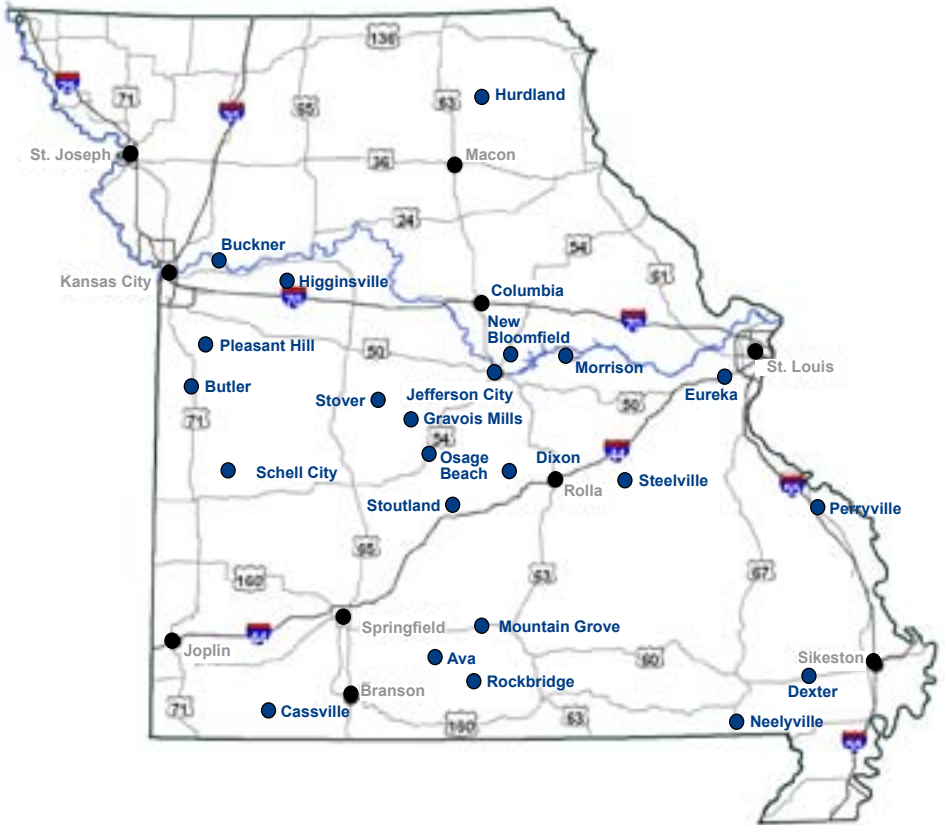

Formerly known as the “Fisherman’s Dude Ranch,” Westover Farms is just 90 miles west of St. Louis and backs up to the Mark Twain National Forest. We invite you to come out and fish our newly restored trout stream or one of our fishable springs. Our waters are geared toward the beginner to advanced fly fisherman. Guide services and instruction are available when reserved in advance. And our fly shop will supply you with whatever you may need to catch that trophy rainbow!

If you are interested in purchasing rainbow trout for stocking your pond, stream, or river, contact Marty and he will provide you with whatever size trout you may need. We provide rainbow trout for state and county parks, sport shows, private ponds, and any other venue you can imagine. We can also haul the fish to just about anywhere you might need them.

We also have luxury log cabin lodging and conference center available for you and your guest. So, keep us in mind the next time you want to sponsor a corporate or fundraising event. We are open year round, seven days a week and require no fishing license. We look forward to seeing you soon!

A Snapshot of Member Businesses

The Missouri aquaculture industry is diverse with producers supplying fish for food, bait, aquariums, and stocking. Distribution to these markets is aided by Missouri aquaculturalists being scattered throughout the state. Supplying this market spectrum translates into a number of species being raised in a range of sizes in several production systems. Hopefully, there is a business near you which can offer the product or service you need. If you can't find what you are looking for in this directory, please don't hesitate to call the Missouri Department of Agriculture at 866-466-8283.
